Backend Software Engineer with 3+ years of hands-on experience building and shipping production systems — including an HVAC e-commerce platform and a multi-platform property management system. Specializes in REST API design, query optimization, and layered backend architecture using Java (Spring Boot) and PHP. Proven ability to work directly with clients, own features end-to-end, and deliver measurable performance improvements.

TECHNICAL SKILLS

Languages: Java, PHP, JavaScript, Python, SQL, C#, HTML/CSS

Tools: Docker, MySQL, SQLite, PostgreSQL, Git, REST APIs, GitHub Actions

Frameworks: Node.js, Express.js, Spring Boot, React

EXPERIENCE

Software Engineer · Part-time

May 2026 – Present

Lumnaire — Philippines

- Architected backend for a multi-platform property management system (web, mobile, desktop, IoT) using Spring Boot REST APIs, with PostgreSQL schema optimized for tenant billing, maintenance ticketing, access control, and payment reconciliation.
- Implemented JWT-based authentication and role-based access control (landlord, tenant, security, admin), establishing Git workflows and API contracts to enable parallel development across frontend, mobile, and desktop teams.
- Built a scalable foundation supporting future IoT expansion (RFID/biometric access logging) while unifying tenant, landlord, and security personnel workflows.

Software Developer · Freelance

May 2023 – Present

Self-Employed — Philippines

- Delivered 7+ production web systems for clients across service, e-commerce, and management domains using PHP, JavaScript, and MySQL.
- Gathered requirements directly from clients, translated them into technical solutions, and owned delivery from architecture through deployment.
- Maintained and debugged live client systems post-launch, reducing downtime and resolving critical bugs under production conditions.

Software Engineer · Part-time

June 2025 – May 2026

Coronacion Refrigeration and Airconditioning Services — Imus, Cavite

- Delivered a production HVAC e-commerce platform with service catalog, online booking engine (daily limits, availability tracking, validation), cart management, integrated payments, and RBAC admin dashboard for managing bookings, orders, customers, and products.
- Secured the platform with HTTPS, CSRF protection, input sanitization, and token-based authentication; optimized performance via SQL query tuning and pagination; owned full feature area from design to deployment including testing and post-launch support.
- Refactored legacy PHP procedural code into layered architecture (Entity, DTO, Controller, Repository, Service) following clean design principles and performed manual system testing and bug fixing on PHP modules before production deployment.

Backend Engineer Intern · Internship

Feb 2026 – Apr 2026

The Thomas Aquinas Institute of Learning — Imus, Cavite

- Built and delivered a full Catholic school website and admin dashboard with authentication, RBAC, real-time notifications, server-side pagination, CRUD operations, and REST APIs.
- Implemented a custom file-based cache-aside pattern on read-heavy endpoints—validated via PDO query counter benchmark on MySQL (500+ records)—reducing average response time from 19.5ms to 0.68ms (100% query reduction) across 50+ sequential requests.
- Resolved N+1 query problem using JOIN optimization (95% reduction, 20% faster execution) and documented the full SDLC using the Iterative Waterfall model, covering requirements, architecture, database design, implementation, and iterative testing.

PROJECTS

Mitolohiya — 2.5D Turn-Based Filipino Mythology Card Game | Unity (C#) | Version Control

- Designed and developed a turn-based card game inspired by Filipino Mythology
- Implemented stats progression system using boost points
- Implemented unlock system—new character every 3 stages for player retention
- Programmed adaptive enemy AI behavior for folklore units

BIBO — AI-Powered E-Learning Platform | github.com/Tanjiro5834/bibo-elearning | Java (Spring Boot) | JavaScript | MySQL | Docker

- Developed REST APIs for lessons, progress tracking, and RBAC using Java (Spring Boot)
- Integrated AI chatbot using Gemini API for student tutoring and interaction
- Implemented authentication, RBAC, and gamification (leaderboards, achievements)

AC and Refrigeration Services — E-Commerce Platform | <https://coronacionservices.com> | HTML | CSS | JavaScript | PHP | MySQL

- Full-stack web app for air conditioning services with a database-driven service catalog and full CRUD
- Applied security best practices (HTTPS, CSRF protection, input sanitization, token-based auth) and optimized SQL query tuning and pagination
- Actively maintains and manages the live platform post-launch

EDUCATION

STI College Bacoor <i>Bachelor's Degree, Computer Science</i>	2022 - 2026
---	-------------

Unida Christian Colleges <i>Information and Communications Technology (ICT Strand)</i>	2020 - 2022
--	-------------
