SUMMARY

Software Engineer with 3 years of freelancing and building software applications using Spring Boot and PHP. Designed and shipped SaaS backend, e-commerce platforms, and full-stack applications following software engineering principles and adhering to security practices. Focused on clean architecture, backend development, and end-to-end delivery.

EXPERIENCE

Software Engineer

Lumnaire — Catanduanes, Bicol | Remote (Part-Time / Project-Based)

May 2026 – Present

- Building Spring Boot REST APIs with PostgreSQL for a property management SaaS; supporting landlord dashboard, tenant mobile app, security portal desktop app, and RFID hardware
- Collaborating with the database schema design for tenant billing, maintenance, payment reconciliation, and access logs with RBAC
- Planning integrations for payment webhooks, push notifications, and MQTT for real-time RFID door events
- Collaborating using Git and writing API documentation to coordinate frontend, mobile, desktop, and IoT teams

Software Developer

Self-Employed — Philippines | Hybrid (Freelance)

June 2023 – Present

- Delivered clean, maintainable code across 7+ production projects — from requirements gathering to deployment
- Provided debugging and maintenance on existing client systems, improving stability across diverse tech stacks

Web Developer

Coronacion Refrigeration & Airconditioning Services — Imus, Cavite | Hybrid (Part-Time)

June 2025 – May 2026

- Delivered a production HVAC e-commerce platform with service catalog, online booking, cart management, and admin dashboard
- Refactored legacy PHP procedural code into a clean layered architecture
- Secured the application with HTTPS, parameterized queries, input sanitization, and token-based authentication
- Implemented server-side pagination and owned the full feature lifecycle from design to deployment and post-launch support

Backend Developer

The Thomas Aquinas Institute of Learning — Imus, Cavite | On-Site (Internship)

Feb 2026 - April 2026

- Built a full school website and admin dashboard with authentication, RBAC, real-time notifications, server-side pagination, and REST APIs
- Documented the full software development lifecycle using the Iterative Waterfall model
- Implemented database query optimization to improve API response times
- Reduced database calls through efficient JOIN strategies for more performant data retrieval

TECHNICAL SKILLS

Languages: Java, PHP, JavaScript, TypeScript, Python, C#, C, C++

Backend: Spring Boot, PHP (PDO, Laravel), Node.js

Frontend: HTML, CSS, JavaScript (ES6+), React

Databases: MySQL, PostgreSQL, SQLite, MSSQL

Tools and Workflows: Git, GitHub, Docker (basics), AWS (basics), Postman, Maven, Gradle, Agile/Scrum

SOFT SKILLS

- Client communication & requirements gathering
- Cross-team collaboration
- Technical documentation
- Problem-solving & performance optimization
- Time management & independent delivery

EDUCATION

B.S. Computer Science | STI College Bacoor

2022 – 2026

ICT Strand | Unida Christian Colleges

2020 – 2022
